

"Tiny Hands in the Soil: Inspiring Young Gardeners for a Greener Tomorrow"

Join the Nature Time team – Elise Potts, Alan Melling, and Dr. Michael Martin – as they adventure into the enchanting world of gardening to teach our little ones about the cycle of life and interconnectedness in nature. They'll discuss how the joy of watching a seed sprout or a butterfly emerge fosters an appreciation for the delicate balance within nature, and how each action — no matter how small — can make a significant impact.

By showing kids the wonders hidden in a patch of soil, we're planting the seeds of understanding, responsibility, and respect for our planet, ultimately raising a generation of mindful caretakers for our Earth. Join us as we unearth the magic of gardening and instill a love for nature in our little ones. Hopefully, they will be our future garden club members.
